

STELLA MARIS

CHERRIES

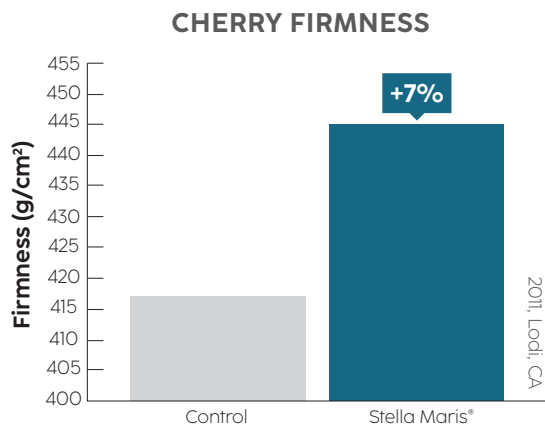

Stella Maris® contains Acadian Plant Health™'s unique technology that helps crops to reach their full yield potential. It enhances crop quality and productivity by enhancing root growth, improving nutritional health and bolstering tolerance to challenging growing conditions.

BENEFITS TO CHERRIES

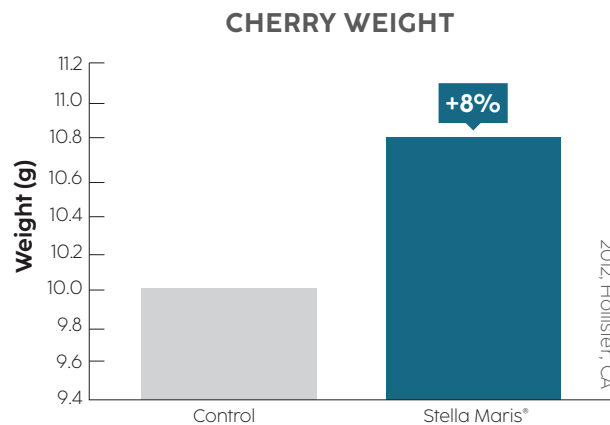

- Enhances rooting
- Increases nutrient uptake
- Mitigates environmental stresses
- Improves overall yield

STELLA MARIS® IMPROVES YIELD AND QUALITY

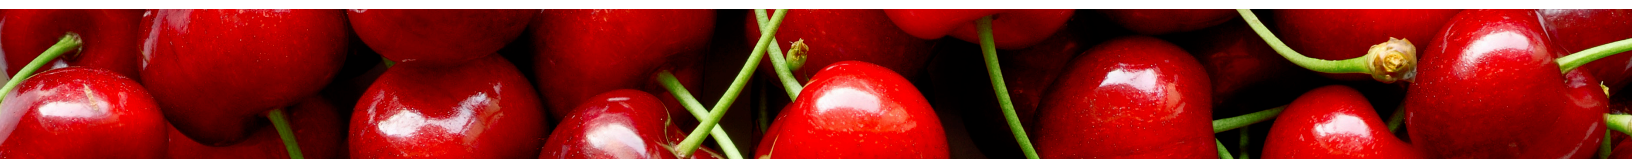

Capitalize on your cherries' yield potential – Stella Maris® gives your trees the power to resist even the toughest environmental stresses and make the most of every ounce of fertilizer that you apply.

Stella Maris®-treated cherries were firmer and higher quality than the Control.

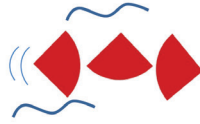

Stella Maris®-treated cherries weighed 8% more, indicating that they were larger.

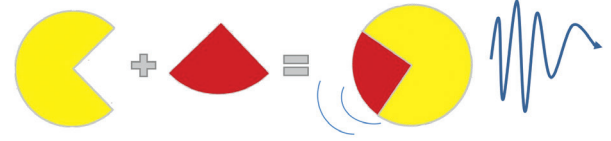

HOW DOES STELLA MARIS® BENEFIT CHERRIES?

IMPROVES NUTRITIONAL UPTAKE

Stella Maris® enhances your nutritional program by improving nutrient uptake. When you apply Stella Maris® as part of your regular application program, you're putting nutrients on the fast track and ensuring your plants get the most out of every ounce of fertilizer. Stella Maris® contains natural complexing sugars which bind to micronutrients, thereby improving their translocation and bioavailability within the plant. Strong growth throughout the season ensures large, beautiful fruit.

By themselves, nutrients can get stuck and tied up.

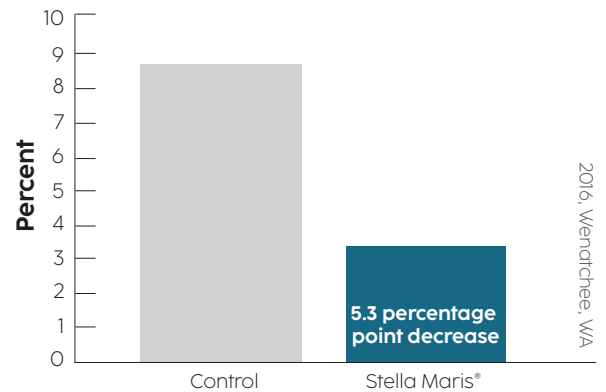

A complexing sugar surrounds the nutrient and can easily carry it to where it is needed.

MITIGATES ENVIRONMENTAL STRESSES

Don't let stress decrease your yield! Stress threatens crop quality with poor fruit set, doubles and spurs. Mid-season applications of Stella Maris® prime your trees to withstand difficult summer conditions that could reduce the number and quality of buds for next year. With its numerous bioactive compounds such as mannitol, unique polysaccharides and betaines, Stella Maris® improves trees' tolerance to a variety of stressful growing conditions including drought, heat, chill and salinity stress. In addition, it helps reduce stem detachment, which is caused by dehydration in storage. It improves your crop's tolerance to tough growing conditions, assuring large, quality fruit that hold stems in storage.

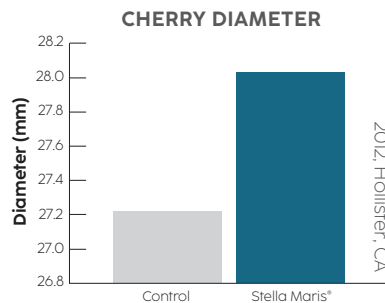

PERCENT OF DOUBLES PER PLOT

Stella Maris® helps your crop tolerate stress resulting in fewer doubles.

IMPROVES OVERALL YIELD AND QUALITY

Stella Maris® gives your crop strong early growth, good nutrition and the ability to tolerate even the most challenging growing conditions for your best yields ever! In addition, Stella Maris® works at a cellular level by improving the nutritional status of your crop, leading to large, firm fruit.

RATES AND TIMINGS

Apply Stella Maris® at 2.5 to 5 litres per hectare at planting or early spring growth; follow by treatments every 7-30 days. Applications can be either foliar or soil.

Additional applications can be made 3-5 days prior to an anticipated plant stress.

Stella Maris® mixes well with nutrients and other agricultural products.
