

APPLES

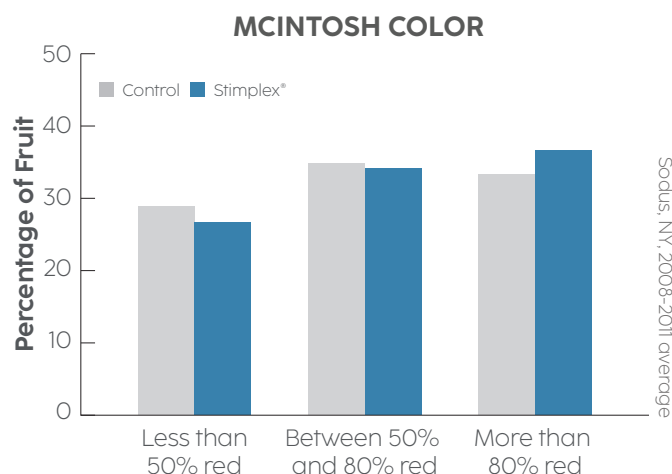

Stimplex® is a unique plant growth stimulator that fuels the growth and development of healthy plants. It works at a cellular level by improving the production of naturally occurring plant hormones that stimulate stress resistance, improve root growth and maximize nutrient uptake. This all leads to enhanced yield for a greater return on investment.

BENEFITS TO APPLES

- Improves red color
- Improves overall yield and quality

STIMPLEX® IMPROVES APPLE COLOR

Stimplex® gives your crop strong early growth, good nutrition and the ability to tolerate the most challenging growing conditions. In addition, it works at a cellular level by improving the production of naturally occurring plant compounds that lead to beautiful fruit colouring.

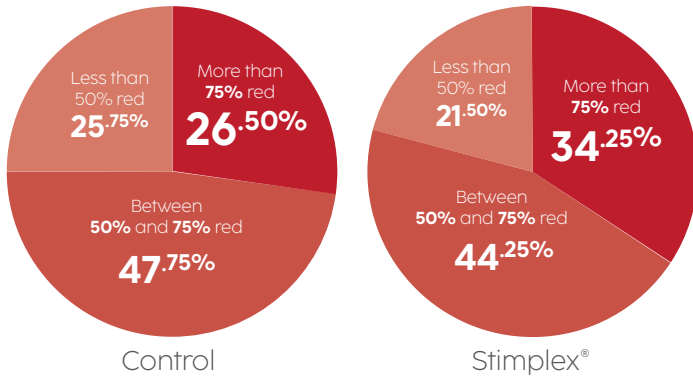

Across four years of trials, Stimplex®-treated apples had better color (more apples in the best color category).

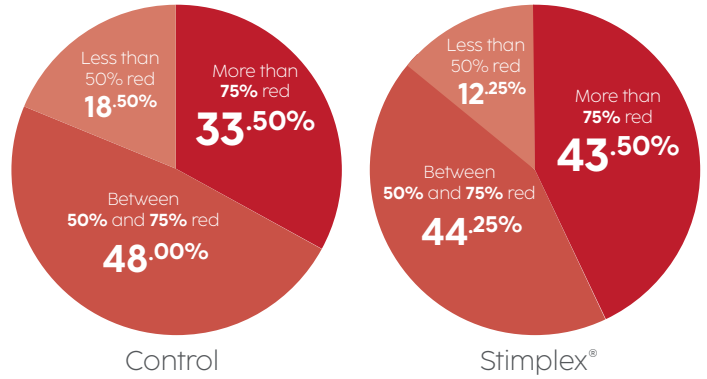

HOW DOES STIMPLEX® BENEFIT APPLES?

IMPROVES RED COLOR: Stimplex® improves red color by increasing phenolic compounds and flavonoids, which are responsible for red color in apples.

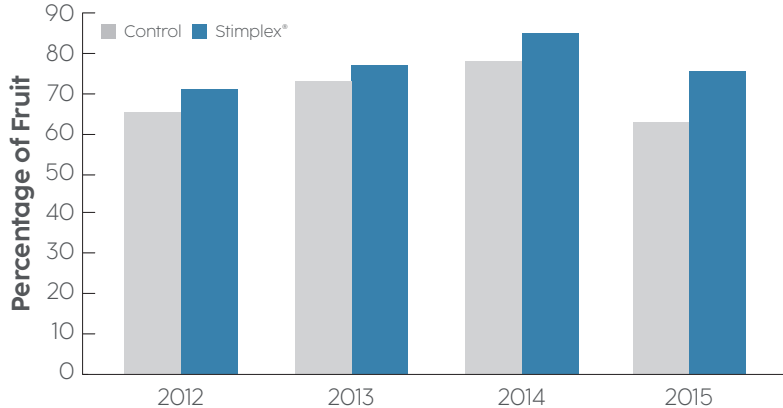

HONEYCRISP COLOR

GALA COLOR

JONAGOLD APPLES WITH DESIRABLE* COLOR

* desirable color = red color on more than 75% of the surface

Year after year, Stimplex® improved the color of Jonagold apples. Every year, the difference between Stimplex® and Control was statistically significant.

RATES AND TIMINGS

Apply Stimplex® foliar at 40 to 128 oz/acre at the following timings:

- Pre-pink
- 1/2 - 3/4" fruit size
- Pink bud
- Repeat every 2 - 4 weeks
- 7-10 days post petal fall
- 2 - 4 weeks after harvest

Stimplex® mixes well with nutrients and other agricultural products.
